

Protex Web Filtering

E2BN's Protex offers a flexible and affordable filtering system that puts you in control of your pupils access to the Internet. Staff and pupils have different filtering profiles - an essential feature for teachers - and subscribing to the Protex service enables your academy or school to tailor the filtering to your own policies.

Protex web filtering is unique in being designed specifically for academies and schools with continuing teacher input and testing. Its list management system allows any user to request changes online. Protex was designed to be very highly scalable - from a single server to clusters of high performance computers.

The Protex filtering system available from E2BN provides safe and secure Internet access to learners and library users. This DfE-approved filtering service provides age-appropriate protection from inappropriate content and a strong defence against student attempts to bypass the filter.

All Protex systems are automatically updated with the latest list and software upgrades. Log analysis can provide you with important management information in the drive to protect users, data and systems.
